extendable bouldering brush

ROTATION
Adjustable -45° to +45°

BRUSHES+STICK INCLUDED

EXTENSION
1400 > 2280mm

WEIGHT
816 grams
including brushes

deWoodstok's extendable bouldering brush consists of an the extendable stick and deWoodstok's brush head equipped with two boar hair brushes. From now on, every hold can be brushed, no matter its angle or shape. The extendable bouldering brush is 140cm long and 228cm in its extended position. By turning the pole, you can fix it to any height between those two lengths. The extendable bouldering brush is recommended for personal outdoor use because of its size and weight. It will do the job perfectly for low and medium high boulders. It can withstand intensive use and fits easily in your crash pad to carry it with you.

The extendable bouldering brush is assembled in the Netherlands.

extendable bouldering brush XL

ROTATION
Adjustable -45° to +45°

BRUSHES+STICK INCLUDED

EXTENSION
1610 > 2660mm

WEIGHT
1245 grams
including brushes

deWoodstok's extendable bouldering brush XL consists of the extendable stick XL, deWoodstok's connector and deWoodstok's brush head equipped with two boar hair brushes. From now on, every hold can be brushed, no matter its angle or shape. The stick has a button to change the height. The extendable bouldering brush XL is 161cm long and 266cm in its extended position and therefore reaches higher than the standard extendable bouldering brush. The extendable bouldering brush XL is recommended for intens commercial use in boulder gyms or at competitions because of its sturdy pole. Also it has a longer reach than our standard extendable bouldering brush.

The extendable bouldering brush XL is assembled in the Netherlands.

bigger hand brush

SIZE
250 x 30 x 26mm

MATERIAL
Beech wood, Boar hair

WEIGHT
66 grams

deWoodstok's deWoodstok's bigger hand brush is made for brushing slopers and small edges at eye-level height. This brush has been specially developed for rock climbing and bouldering, indoors and outdoors. The bigger hand brush has been extensively tested to determine the density and length of the boar hair bristles to achieve the best brushing result. The beech wooden handle is sturdy and won't break regardless the pressure you might need to properly clean the holds. Easily stowed in your boulder bag, this brush is an indispensable tool to bring along to the gym or on your next bouldering trip!

The bigger hand brush is custom made in the Netherlands.

woodbord

SIZE
590 x 148 x 40mm

SCREWS
4x Stainless steel 5,0x90

MATERIAL
Bamboo

WEIGHT
1900 grams

deWoodstok's woodbord is a hangboard for all levels to increase, but also maintain finger strength. All holds are nicely rounded and feel comfortable for your fingers. The woodbord is milled from certified bamboo, the logo is laser engraved. The fibers of the material provide high friction and are gentle to the skin. Perfect for training in the gym or at home!

The woodbord includes:

- A large declining rim on top, perfect to warm-up
- 4-finger pockets with depths of 13, 16, 20, 25, 30 and 35mm
- 2-finger pockets with depths of 20 and 35mm
- 4 screws to mount on a wall for installation

The woodbord is custom made in the Netherlands.

PRODUCT TEXTS deWoodstok Parts

brush head

ROTATION
Adjustable -45° to +45°

INSERT INTO HEAD
Ø25mm

MATERIAL
PP Plastic & birch ply wood

WEIGHT
282 grams

deWoodstok's brush head is equipped with deWoodstok's big brush and deWoodstok's small brush and it fits the extendable stick and extendable stick XL in combination with the connector. With the use of the lever, you can adjust the angle of the brush head and clean holds in any position. The two different brushes are replaceable. If they're worn out, just unscrew the two bolts and replace the brushes. The brush head contains milled and laser cut parts made of birch ply wood. The brush head is developed for indoor and outdoor use.

big brush

SIZE
106 x 43 x 36mm

MATERIAL
Beech wood, Boar hair

WEIGHT
72 grams
including brushes

deWoodstok's big brush is specially developed for bouldering, indoors and outdoors. The big brush is prepared to fit deWoodstok's brush head and has a big surface of boar hair bristles which makes cleaning slopers, wall surfaces and elements super easy. The smallest edges will be no problem too!

The big brush has been extensively tested to determine the density and length of the boar hair bristles to achieve the best brushing result. The best results are also achieved by the size of the brush: small enough to enable you to exert enough pressure when brushing high holds and large enough to be able to clean big holds.

deWoodstok's big brush is a replacement part and can be purchased separately. Is your current big brush worn out? Just unscrew the two bolts and replace the big brush on the brush head. The big brush is perfect for indoor and outdoor use.

The big brush is custom made in the Netherlands.

small brush

SIZE
180 x 15 x 21mm

MATERIAL
Beech wood, Boar hair

WEIGHT
20 grams

deWoodstok's small brush is specially developed for rock climbing and bouldering, indoors and outdoors. The small brush is prepared to fit deWoodstok's brush head but can also be used as a hand brush. The small surface of boar hair bristles makes cleaning crimpers super easy.

The small brush has been extensively tested to determine the density and length of the boar hair bristles to achieve the best brushing result. The best results are also achieved by the size of the brush: small enough to enable you to properly clean small crimps and pockets, big enough to be sturdy and lasting. Easily stowed in your boulder bag, this brush is an indispensable tool to bring along to the gym or on your next bouldering trip!

deWoodstok's small brush is a replacement part and can be purchased separately. You can also use it as a hand brush. Is your current small brush worn out? Just unscrew the two bolts and replace the small brush on the brush head. The small brush is perfect for indoor and outdoor use. The small brush is custom made in the Netherlands.

PRODUCT TEXTS deWoodstok Parts

extendable stick

EXTENSION
1140 > 2020mm

INSERT INTO HEAD
Ø25mm

MATERIAL
Steel & Plastic

WEIGHT
534 grams

deWoodstok's extendable stick has a conical top and fits deWoodstok's brush head. The two buttons on the top of the extendable stick will prevent the brush head from coming loose. The extendable stick is extendable from 114cm to 202cm (without the brush head). By turning the pole, you can fix it to any height between those two lengths. The extendable stick is perfect for indoor and outdoor use.

extendable stick XL

EXTENSION
1350 > 2400mm

TOP
3/4"-5 threaded

MATERIAL
Aluminum & Glass Fiber Reinforced Nylon

WEIGHT
925 grams

deWoodstok's extendable stick XL has a 3/4"-5 threaded top and comes together with deWoodstok's connector. You can fit deWoodstok's brush head by turning the connector onto the threaded top. The stick has a button to change the height. The extendable stick XL is extendable from 135cm to 240cm (without the brush head) and therefore reaches higher than the standard extendable stick. The extendable stick XL is developed to handle intensive use in rough situations and is therefore perfect for indoor use and bouldering competitions. The threaded top of the extendable stick XL is similar to most US and Canadian pole tops. The connector does fit most US and Canadian poles.

connector

SIZE
131mm x Ø33mm

FITS
3/4"-5 threaded top

MATERIAL
Glass Fiber Reinforced Nylon

WEIGHT
75 grams

deWoodstok's connector is developed to connect deWoodstok's extendable stick XL or any other 3/4"-5 threaded pole with deWoodstok's brush head. The connector is compatible with most US and Canadian poles. You can fit deWoodstok's brush head by turning the connector onto the threaded top. The two buttons on the connector will prevent the brush head from coming loose from the extendable stick. The connector comes with a knurled ring for the best connection.

About deWoodstok

deWoodstok was founded by three Dutch climbers in 2012. Struck by the fact that even on bouldering world cups DIY brushes were used, they were convinced by the idea that brushing solutions could be improved. A phase of prototyping followed until the first version of the extendable bouldering brush was released in 2013. By then it was the first bouldering brush on the market to feature brushes that were adjustable in angle. Since the very start of this product, the IFSC has been using deWoodstok bouldering brushes at boulder World Cups worldwide. Throughout the years the product and its production process evolved. Brushes and parts improved for a better experience and an even more sturdy gym version was introduced (extendable bouldering brush XL - 2021). Along the way, the wish to improve bouldering tools on the market led to the introduction of other products: the bigger hand brush (2016) and the woodbord (2020).
